

ABSTRACT OF THE DISCLOSURE

A combination for managing the involuntary loss of bladder control is disclosed along with a method of using and manufacturing the combination. The combination includes an anti-incontinent agent capable of reducing urinary loss and an absorbent article capable of absorbing urine that is lost from the body. The anti-incontinent agent is enclosed in a first wrapper and the absorbent article is positioned adjacent to the wrapped anti-incontinent agent. A pouch encloses the wrapped anti-incontinent agent and the absorbent article to keep both items sanitary. A combination of a disposable absorbent article and information related to an anti-incontinent agent is also disclosed.
